

Technical Work as of 2/17/25

Front End:

The front end has been mainly focusing on the design and functionality of the homepage. We've tested out various website styles/fonts/etc and are still in the process of choosing a theme that would fit the CIRT best. We've also been going back and forth with different user features to ensure that they are not only functional, but also make sense for the website to even have. We have a drawing outline of a homepage that we are referencing and updating as we think of new ideas. We are currently using HTML, CSS, and JavaScript but plan to learn React as well.

Back End:
